A. You are using the SPWebPartManager object instead of the SPWebPartManager instance but the 2 objects are basically the same. You can get the instance of the SPWebPartManager object that is used for the current site with \$webPartManager = [Microsoft.SharePoint.SPWebPartManager]::Current; You can then ask the object for the web parts that are currently added to the site. \$webParts = \$webPartManager.WebParts; People v Leunifer (2015 NY Slip Op 03113) People v Leun 09e8f5149f

Austin Traffic Camera Tour

This Widget allows you to view the tour of traffic cameras for Austin as found on the TxDot web site. Austin Traffic Camera Tour is a useful widget for all those who need to know the current status of the traffic in the Austin area. Requirements: [Yahoo! Widget Engine](#) Austin Traffic Camera Tour Description: This Widget allows you to view the tour of traffic cameras for Austin as found on the TxDot web site. Austin Traffic Camera Tour is a useful widget for all those who need to know the current status of the traffic in the Austin area. Requirements: [Yahoo! Widget Engine](#) Here's What the National Climate Assessment Says It is no longer a question of "if," but a question of "when" the climate will change. The summer of 2008 proved to be extremely hot in the United States and the world. There was no doubt that 2005 was the warmest year on record. Drought conditions swept across the nation. Hurricanes Katrina and Rita destroyed vital infrastructure. Hurricane-force rains fell in parts of the country. The worst cyclone ever to hit Australia. Cyclone Tracy, made landfall in the northern Australian state of Queensland. Rainfall records were broken by almost a foot in some parts of southern Texas, including Waco, Austin and San Antonio. Cyclones in Japan killed more than 40 people, most of them due to the disaster brought by the tsunami. In the U.S., drought conditions triggered the largest and most destructive wildfire in recent history, as well as the largest and costliest U.S. flood and hurricane season. All of this happened in a single year. The U.S. climate is the textbook climate -- a system where weather events unfold in a stable and predictable manner. The climate is always changing but the gradual natural cycling of the atmosphere has withstood the influence of humanity's effects, living up to the faithful promise of the climate system's "golden rule" -- "forever, always, and everywhere, the same." However, with climate change, the climate is expected to change much more rapidly. Climate change is expected to continue to warm the planet with even more significant changes in our climate system, including changes in the frequency and intensity of both major and minor climate events. These effects will likely be felt across the entirety of the planet, at all altitudes, all times of day and night, in
