What's New in the Migratr?

Migratr is a photo management tool that will allow you to upload and download photos between various online photo-sharing sites. You can use the program to download the images from your online account and to upload some of them to another account. The supported sites include: Flickr, 23HQ, SmugMug, Faces.com, PicasaWeb, Phanfare, Zenfolio, and Gallery2. An attractive feature of the program is the fact that you can configure the program from the

panel and the program will auto-reconnect. This means that if you close the program, it will remember where you were in the editing process and will immediately reopen the current file you are working with. Another feature that makes the program unique is that it allows you to modify the filename of the photos before they are uploaded. The program has a number of features that can be found in similar programs, however it does not have a web gallery. This means that you have to manually upload the photos you want to share. Migratr is well designed with an intuitive interface. For instance, when you click on a picture, the picture is displayed in the preview window and you can easily manipulate it by dragging or zooming in and out. What's New in v4.0: -Added support for Flickr -Added support for Phanfare -Added support for Gallery2 -Added support for Zenfolio -Added support for Phanfare (beta) -Various bug fixes Ratings Details Migratr is a photo management tool that will allow you to upload and download photos between various online photo-sharing sites.
