Description: PC Advisor is a network-security suite designed to assess the security level of an enterprise network. It was created with the aim of helping network administrators in their job, not only as an advanced network-scanner tool but also as a tool for the security audit of an organization. PC Advisor includes, among other features, an information collector, a vulnerability scanner, a network vulnerability scanner, a port scanner, and an HTTP client and analyzer. PC Advisor is a suite of tools and functions that offers an excellent interface, which is not too complicated and does not involve high technical knowledge, and is ideal for a novice user, but also for advanced users who want a wider view of a network. This version of PC Advisor includes the following tools: Host Finder This is a simple tool for scanning for hosts on a local area network (LAN). The program connects to the network and then scans all available hosts, providing their IP addresses. File Transfer This tool connects to a remote host (or server), then sends a file to the host. This tool allows you to transfer files, as well as upload files to remote servers. HTTP Analyzer This tool lets you analyze HTTP web pages on a remote host. Information Collector This tool collects and analyzes information, as well as shows information on devices that are connected to the network. Port Scanner This tool finds the open ports of a host on the network. Vulnerability Scanner This tool provides an assessment of a network by finding possible security vulnerabilities. Network Vulnerability Scanner This tool scans network devices for vulnerabilities, and finds and analyzes possible security problems

NetScanTools Basic Edition is an application suite which bundles a few standard tools for managing a network, such as Ping and Traceroute, recommended for network administrators. It is simple to work with it. After a brief and uneventful setup procedure which doesn't require special input from the user, you are welcomed by a clean and well-organized window, where you can get started by looking into the help file if you're unsure of how Internet tools work. The program lets you use a simple DNS function by providing a hostname, IPv4 address or domain name, in order to run a simple query. Plus, you can find out the properties of your own system via "Who am I?" (hostname, IPv4 address, domain name), or test the default DNS. In addition, you can use the Ping function after inputting a target hostname of IPv4 address and view the responding IPv4, time, TTL and status, get a graphical representation of Ping (e.g. set delay between Pings, response timeout, maximum hop count), as well as do a Traceroute. Other tools of NetScanTools Basic Edition revolve around a Ping scanner and Whois. Furthermore, you can use a search function when dealing with large amounts of text, customize bars and change the application look. NetScanTools Basic Edition is low-demanding concerning CPU and RAM, has a good response time and works well, without making Windows hang, crash or pop up error dialogs; we have not encountered any issues in our tests. All in all, NetScanTools Basic Edition provides some standard tools for looking over a network, which is ideal for less experienced users.
