syndrome. Thirty-six preterm neonates with CDH who underwent surgical treatment for ruptured membranes with severe neonatal respiratory syndrome in Nanfang Hospital of Southern Medical University from January 2012 to January 2015 were enrolled in this study. There were 28 males and 8 females. The median gestational age and birth weight were  $(29.0 \pm 2.9)$  weeks and  $(1\ 030 \pm 288)$  g, respectively. The median age and weight at the time of surgery were 3 days and  $(2\ 675 \pm 946)$  g, respectively. All patients underwent surgery by the same team of surgeons. Ten patients received a combined procedure for CDH repair and intestinal surgery. All procedures were performed without side effects related to anesthesia or surgery. Four neonates had respiratory failure and thus required postoperative high-flow oxygen therapy, and their oxygen saturation gradually returned to normal. The CDH closure time ranged from 5 to 15 days
