SuperScan Crack+ Keygen For (LifeTime) Free [Mac/Win]

"SuperScan is a multi-functional application designed as a TCP port scanner, pinger and address resolver. It encases a fine selection of utilities that can assist network administrators in monitoring and controlling hosts and domains." The latest version of SuperScan is here. This is the application version 3.7.5. This version is a very good one with lots of great new features. This is a small update, but very important. This update brings lots of new features and improvements, to name a few: -SuperScan allows to run multiple scans with unlimited number of targets -SuperScan now logs scanned ports on a separate window -SuperScan now allows to connect to a remote SQL server from a .NET application (via SQLDCE) -SuperScan can now detect and read SPNs -SuperScan can now detect Apple Bonjour and Microsoft Smb Sockets -SuperScan can now connect to WMI, CIM and SCOM clients -SuperScan can now work in silent mode -SuperScan allows now to batch scan a large number of hosts in a selected domain -SuperScan can now resume a previous scan -SuperScan can now save scanned hosts/domains/services/ports into a file -SuperScan now works with the latest .NET Framework -SuperScan now saves scans, ports, hosts, hosts IPv4, IPv6 and all combinations -SuperScan now also handles wildcard domains -SuperScan now also supports all IPv6 types -SuperScan now also supports all IPv6 types -SuperScan now also allows to filter scan results (with "StextS" or "text") -SuperScan now shows DNS replies -SuperScan now allows to run multiple scans in parallel -SuperScan now also allows to edit scanned hosts/domains/services/ports -SuperScan now also allows to send an update to all clients -SuperScan now also allows to share a discovered IP -SuperScan now shows the name of a discovered host as the hostname -SuperScan now shows the name of a discovered host as the hostname -SuperScan now uses as default port 80 -SuperScan now checks for an update -SuperScan now shows the number of domains/hosts/ports scanned -SuperScan now shows the number of hosts/domains

SuperScan Crack [32/64bit]

Cracked SuperScan With Keygen as a network scanner with powerful functions and abilities. It has a built-in website resolver with a built-in domain name service. You can also have your personal domain (must be registered) to be resolved automatically and cached into the memory. License: Freeware WHYSuperScan Torrent Download is a powerful TCP Port Scanner and Port Ping Master, designed to replace the outdated and highly limited scan and ping utilities of other tools. WHYSuperScan is a highly improved port scanner, that allows you to quickly check the availability of a web site and resolve its DNS name, simply by pressing the built-in web resolver (it will be automatically opened by the application on the URL specified). The web resolver allows you to automatically resolve domain name for all available servers with the Internet, while the whole process is completed in a matter of seconds. WHYSuperScan works as a real TCP Port Scanner, with the ability to perform a recursive scan to a specified IP range. The program allows you to perform an unlimited number of simultaneous scan and ping tasks, with automatic saving of scan results into files. WHYSuperScan is a powerful and easy-to-use TCP port scanner, that allows you to quickly check the availability of a web site, or automatically open a specified URL with a built-in web resolver. Installation is not necessary, since this is a portable application. You can copy the files on your removable drive and have it at your disposal everywhere you go, without leaving a footprint on the system registry. The interface is simple, yet organized and easy to understand. The program's features are divided into several tabs, as follows. The Scan section allows you to lookup a hostname / IP or a range of IPs, with the results in the lower area of the UI. The Host and Discovery module enables you to configure timeouts and port range for UDP and TCP scan modes, while the Scan Options tab allows you to configure the scan speed. From the Tools section, you have access to a wide array of utilities, including hostname lookup, ping, traceroute, bulk resolve (works with a list of IPs), HTTP head / GET Requests and WhoIs. The Windows Enumeration tab displays general information for the specified host (NetBIOS Name Table, MAC Address, Shares, Account Policies, Logon Sessions, Services, etc). The speed that WHYSuperScan was capable during our tests was quite decent. It didn't 1d6a3396d6

SuperScan Crack+

Perl-based application for network monitoring. SuperScan is a multi-functional application designed as a TCP port scanner, pinger and address resolver. SuperScan has gained its crowd of fans over time due to its superior scanning speed and fast hostname resolving capabilities. In addition to its main purpose, the application also features a collection of useful tools that includes ping, traceroute, WhoIs and HTTP request. Installation is not necessary, since this is a portable application. You can copy the files on your removable drive and have it at your disposal everywhere you go, without leaving a footprint on the system registry. The interface is simple, yet organized and easy to understand. The program's features are divided into several tabs, as follows. The Scan section allows you to lookup a hostname / IP or a range of IPs, with the results in the lower area of the UI. The Host and Discovery module enables you to configure timeouts and port range for UDP and TCP scan modes, while the Scan Options tab allows you to configure the scan speed. From the Tools section, you have access to a wide array of utilities, including hostname lookup, ping, traceroute, bulk resolve (works with a list of IPs), HTTP head / GET Requests and WhoIs. The Windows Enumeration tab displays general information for the specified host (NetBIOS Name Table, MAC Address, Shares, Account Policies, Logon Sessions, Services, etc). The speed that SuperScan was capable during our tests was quite decent. It didn't crash even when we requested a scan for a very large IP range and performed all the tasks as instructed. In conclusion, SuperScan is a wise choice for any user interested in monitoring certain hosts and a must-have for network administrators. Description: Perl-based application for network monitoring.
