Protectorion ToGo is a simple and secure method of encrypting files stored on your portable storage device such as memory stick or USB key. This tool has been specially designed to protect your sensitive data. File encryption can be used to encrypt files stored on your portable storage device. If you decide to add the encrypted files to Protectorion ToGo it will decrypt and add it to your encrypted database. Once the encrypted file has been added you will not be able to access it unless you enter the password that you created in Protectorion ToGo. Nowadays a growing number of people store their private or confidential information on portable storage devices. Unfortunately, there are cases when you forget or lose the device and it can then be mislaid by a dishonest person. Even worse, confidential information may be stolen by a thief who might use it for their own purposes. To protect your private information on your portable device you should use Protectorion ToGo to create a database of encrypted files that you can recover whenever you need to access them. You can use Protectorion ToGo to protect all the files stored on your portable storage device or you can restrict its application to encrypt specific folders or files that you want to protect. The program supports drag and drop which makes it very easy to add new encrypted files. You can generate a password for each folder or you can automatically generate a common password for all the folders. When you add a new file to a folder Protectorion ToGo will check the integrity of the file before adding it to the database. Once you have finished adding all the files you can store them in the database by using the default email client or you can export the files to a file system that you can open or send by using the email client that you use. You can access all the files stored on your portable storage device by using Protectorion ToGo and search for them by name or to quickly locate the encrypted files in order to assess the security risks. You can also create a password database that can store the website credentials that you use, email passwords and other passphrases that you usually need to remember. If you forget your username and password you can unlock your Protectorion ToGo account by entering the strong password that you created in the program. Protectorion ToGo System Requirements: Operating Systems: • Windows 7 • Windows 8 • Windows 10 Compatibility: • Windows Vista • Windows 7 • Windows 8 • Windows 8.1 • Windows 10 09e8f5149f

Protects all of your files and folders on a memory card 256-bit AES Encryption Private Password Database Create folders to organise your files Drag & Drop File Access Drag & Drop File Encryption Protects all of your files and folders on a memory card AES 256-bit encryption is a widely used algorithm. It generates a complex password that enables only the owner of the password to access the files. If you lose the password, you will not be able to view the files. Private Password Database A password database allows you to store all your passwords as an easy to remember value. The private database is password protected and anyone who does not know the password will not be able to access it. Create folders to organise your files The interface of the program allows you to create folders with any name. So you can store all your files in a single folder in order to organise them or you can create separate folders to separate the personal files, a set of photos or any other collection. Drag & Drop File Access Protectorion ToGo allows you to drag and drop files in the password database and also to the programme interface. This feature lets you search for an item by using its name, visit websites on one click and open a file with one click on another. Drag & Drop File Encryption With this feature you can create a password using the text box and save it to the database. Once the memory card is connected to your computer all the files that have the same password will be encrypted. When you want to access the encrypted files, you will need the corresponding password. If the file password has been changed, you can use the 'export password' button to save the encrypted file so you do not lose the content. Protects all of your files and folders on a memory card 256-bit AES Encryption AES algorithm is very strong and can also protect data even if your portable device is lost or stolen. AES is also well known as Advanced Encryption Standard and was created by the U.S. government. This encryption algorithm is the most widely used and is used by the FBI. The password is based on a 256-bit which is twice as strong as a 64-bit password. The program generates a complex password that enables only the owner of the password to access the files. If you lose the password, you will not be able to view the files. Private

If you don't remember your password you can use the brute-force feature to decrypt the files. The program includes an advanced search feature and a detailed information about the file content in order to analyze the risks of leaking information. The program lets you encrypt selected files with a random password and not only that it lets you encrypt the data with a secure AES algorithm and the 256-bit strength in order to prevent a possible hacker from accessing your sensitive information. Protectorion ToGo is a freeware file encryption application that doesn't require any installation and you can access it by clicking [here](#). Protectorion ToGo Features: File Encryption Protectorion ToGo supports the two most popular file encryption algorithms for ensuring high-level security. The program lets you encrypt all the files that you have stored on your storage device with a default password. You can protect selected files by using a password that you have specified in the options. This feature makes it possible to conceal your information with a single password. You can also create multiple folders in order to organize your files which is an excellent feature. If the files are encrypted you can preview their content in order to select the correct ones. The program supports drag and drop which means that it will be easier to use. You can re-arrange the order of the selected files in the list which is very useful in case you want to select all the files that you want to be encrypted. The whole database can be secured by using the protectorion database protection feature. In case the user forgets the password, the brute-force option will allow the user to decrypt the database with a different password. The program also comes with an auto backup feature which is useful when you are not at home and you want to protect your sensitive data. The right-click option allows you to encrypt the files on your storage device with a password. You can export selected files in order to transfer them to other devices or to send them to other users. Advanced Search The advanced search feature allows you to find files by their name and you also have the option to enter the keywords for browsing your folder. You can check the security status of the files and save the search details in order to display the relevant information in
